The information in this document is subject to change without notice and should not be construed as a commitment by Digital Equipment Corporation.

Digital Equipment Corporation assumes no responsibility for any errors that may appear in this document.

The software, if any, described in this document is furnished under a license and may be used or copied only in accordance with the terms of such license. No responsibility is assumed for the use or reliability of software or equipment that is not supplied by Digital Equipment Corporation or its affiliated companies.

FCC NOTICE: The equipment described in this manual generates, uses, and may emit radio frequency energy. The equipment has been type tested and found to comply with the limits for a Class A computing device pursuant to Subpart J of Part 15 of FCC Rules, which are designed to provide reasonable protection against such radio frequency interference when operated in a commercial environment. Operation of this equipment in a residential area may cause interference, in which case the user at his own expense may be required to take measures to correct the interference.

1 RD54 Fixed Disk Drive

The RD54 fixed disk drive is a large-capacity, full-height drive available in either the system unit of the MicroVAX 2000 or in the fixed disk expansion box. If you have a diskless system and want to install an RD54 drive, you must have your service representative perform the installation.

You can format the RD54 drive using the instructions in the section entitled Formatting Fixed Disks in Chapter 1 of the *MicroVAX 2000 Owner's Manual*. Formatting an RD54 drive takes forty minutes.

After formatting, run the Fixed Disk Verifier, as explained in Chapter 2 of the *MicroVAX 2000 Owner's Manual*. The verifier takes twenty minutes to run.

The RD54 drive can store 155 megabytes of data after formatting.
